Education

Drexel University **Expected Graduation: Jun 2028**

Bachelor of Science in Computer Science — Cumulative GPA: 3.69 *Philadelphia, PA*

Technical Skills

Languages: Python, C#, TypeScript, JavaScript, Java, C, SQL, XPath, HTML, CSS, Racket, Bash, Haskell

Frameworks & Libraries: .NET, Selenium WebDriver, JUnit, Next.js, React, Express, Node.js, Tailwind CSS, Flask

Databases & Tools: Azure DevOps, Git, Supabase, MSSQL, PostgreSQL, Prisma, Swagger, Postman, SQLite, SQLAlchemy

Experience

WebstaurantStore **Mar 2026 – Sep 2026**

QA Automation Engineer Co-Op *Remote*

- Developed and maintained automated tests in C# covering end-to-end tracking, shipping, vendor management, and order processing workflows for a high-volume platform
- Built modular, reusable automation test suites in C# and .NET using a custom Selenium-based framework to improve test maintainability and expand regression coverage
- Validated end-to-end application integrity across UI, API, and database layers utilizing SQL/MSSQL, Swagger contract checks, and backend data verification
- Collaborated with cross-functional teams in Azure DevOps to triage defects, link automated test coverage to user stories, and verify fixes for reliable product releases

Drexel University **Mar 2025 – Sep 2025**

AI Research Co-Op *Remote*

- Researched and synthesized cutting-edge AI developments and video and sound restoration algorithms, translating complex technical concepts into accessible learning materials
- Designed and developed hands-on courses on Generative AI and AI-powered application development, integrating practical exercises with tools such as Hugging Face, Google Gemini, and Python
- Reviewed the content of 20+ team members, provided constructive feedback, and facilitated meetings to maintain quality, consistency, and alignment with lab objectives

Projects

GameDex | Website | Source Code | *Next.js, React, TypeScript, Express, PostgreSQL* **Jun 2025 – Present**

- Built a full-stack platform enabling users to browse game deals and manage custom libraries using a responsive UI built with Next.js, React, and TypeScript
- Designed backend RESTful APIs and PostgreSQL database schemas using Prisma, while implementing secure JWT and bcrypt authentication for user data protection
- Integrated the Google Gemini API to deliver personalized, AI-driven game recommendations by analyzing users' saved libraries and preferences

InternSight | Website | Source Code | *Next.js, React, TypeScript, Express, PostgreSQL* **Sep 2025 – Present**

- Built an AI-powered resume analyzer using the Google Gemini API to generate personalized feedback, ATS compatibility scoring, and actionable content improvements.
- Developed scalable backend infrastructure using Express RESTful APIs and PostgreSQL to securely process user resume submissions and manage data seamlessly
- Engineered a modern, responsive frontend leveraging a component-based architecture in Next.js, React, and Tailwind CSS to ensure a consistent user experience

WanderPlanner | Website | Source Code | *Flask, Python, SQLite, JavaScript* **Jan 2024 – Jun 2024**

- Developed a full-stack travel itinerary website using a Flask backend, an HTML, CSS, and JavaScript frontend, while managing a SQLite database to store user account information and saved itineraries
- Utilized OpenCage, Foursquare, and Google Maps APIs to power dynamic trip planning, enabling personalized recommendations and multi-modal travel routing

Banking Software System | *Java, JUnit* **Oct 2024 – Dec 2024**

- Engineered a modular banking system in Java adhering to OOP principles, incorporating automated APR calculation, time-based balance updates, and transaction rules to ensure scalability, maintainability, and accurate account management
- Conducted 400+ automated tests using JUnit and Test Driven Development (TDD), validating core business logic and maximizing reliability through mutation testing and code coverage
